CONNECTIVE TISSUE GRAFT

Shruti Bhatnagar

Department of Periodontology, Rungta College of Dental Sciences and
Research (Pt. D.D.U Memorial and Ayush Uni. of C.G.),
Bhilai-Durg, Chhattisgarh, India

ABSTRACT

Connective tissue graft is a promising and reliable method that provides a satisfactory esthetic outcome, making it a popular alternative for clinicians. It can be described as a free autogenous graft. The surgical procedure was first described by Alan Edel in 1974 for increase in width of attached gingiva. It is generally used to obtain root coverage following gingival recession, which was a later development by Burt Langer in the early 1980s. The SCTG is obtained usually from the palatal area, tuberosity area, retromolar pad area too. The advantages of the SCTG are that it is inexpensive, versatile, and easily available; it provides successful outcomes; it is less invasive than other autogenous harvesting techniques; and it has a shorter healing period. Apart from this SCTG also have osteogenic, chondrogenic and mesenchymal properties. A connective tissue graft also could be used as a barrier for furcation defects and intrabony defects.

What is Open Access?

Open Access is an initiative that aims to make scientific research freely available to all. To date our community has made over 100 million downloads. It's based on principles of collaboration, unobstructed discovery, and, most importantly, scientific progression. As PhD students, we found it difficult to access the research we needed, so we decided to create a new Open Access publisher that levels the playing field for scientists across the world. How? By making research easy to access, and puts the academic needs of the researchers before the business interests of publishers.

We are a community of more than 103,000 authors and editors from 3,391 institutions spanning 160 countries, including Nobel Prize winners and some of the world's most-cited researchers. Publishing on IntechOpen allows authors to earn citations and find new collaborators, meaning more people see your work not only from your own field of study, but from other related fields too.

Brief Introduction to this section that describes Open Access especially from an IntechOpen perspective
